## DevOps

### What is DevOps?

📅 01 SEPTEMBER 2015   👤 DONOVAN-BROWN   📁 WORK

💬 (24)

DevOps is the union of people, process, and products to enable continuous delivery of value to our end users.

I am very deliberate in the terms used in this definition. I choose value over software. DevOps is not just automating a pipeline so we can quickly deliver software. Our goal is to deliver value. The term end users was also very carefully chosen. The value we produce must reach our end users. If the value only reaches the Dev and QA environments but is held up before reaching production where it can be realized by our end users, we are still failing.

It is very important to realize that DevOps is not a product. You cannot buy DevOps and install it. DevOps is not just automation or infrastructure as code. DevOps is people following a process enabled by products to deliver value to our end users.

### Donovan Brown Microsoft

**Donovan Brown** is a Senior DevOps Program Manager on **Microsoft's** US Developer Division team. ... Before joining **Microsoft**, **Donovan** spent seven years as a Process Consultant and a Certified Scrum Master. Developer Tools are his thing.

Plan & Document

# Definitions

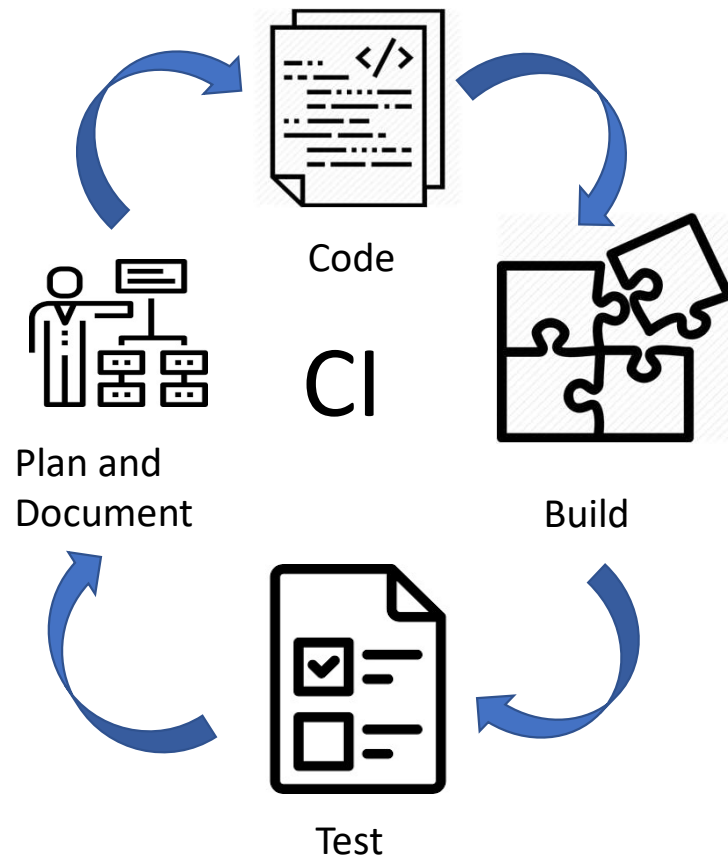

## DevOps - Culture

- Shared Responsibility
- Collaboration
- Feedback
- Autonomous

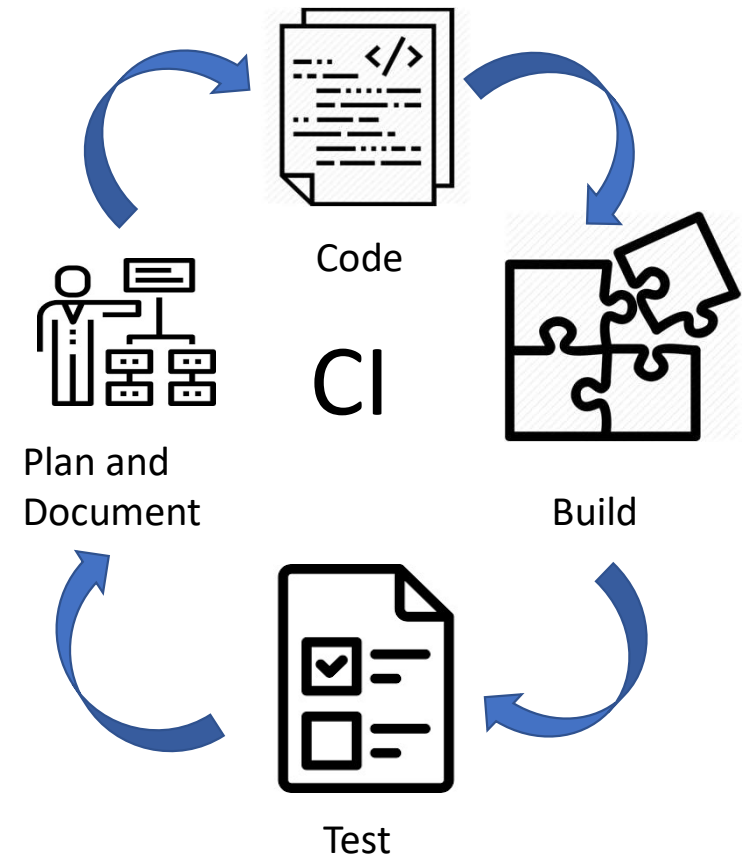

# DevOps Practices

# Continuous Integration

- Plan & Document
  - Scope
  - Effort
  - Priorities
- Code
  - Versioning mainline
  - Start work anytime from mainline
  - Automated Integration to mainline

# Continuous Integration

- Build
  - Automated Builds from any branch
  - Fast builds
  - Easy to reproduce
  - Maintain output available
  - Result should always be success
    - If not ... fix it ASAP
- Tests
  - Automate unit tests
  - Maintain tests simple and focus
  - enable static code analysis
- Pipeline all of this

# Continuous Delivery

- Release
  - Scope
  - Versioning
  - Triggered by successful builds
  - Manage dependencies
  - Deploy @ anytime
- Deploy
  - Configure once, deploy allways
  - Triggered by release
  - Environments for everyone
  - Enable Approvals checkpoints
  - Environments similiar to production
  - Enable fast roolback mechanisms

# Continuous Delivery

- Monitor
  - Applications
    - logs by severity configurable
  - Infrastructure
    - Health checks
  - Orchestration
    - Maintain correlation Ids
- Operate
  - Manage application instances
    - Provisioning
    - Scalability
  - Manage infrastructure maintain applications

**YOU BUILD IT**

**YOU RUN IT**
